

FAY SAADI

Senior Software Architect

faysaadi@pm.me • 778-251-2517 • Calgary, AB • LinkedIn • GitHub

SUMMARY

Senior Software Architect with 8+ years of experience architecting cloud-native distributed systems. Adept at bridging technical implementation and business strategy to drive organizational impact.

WORK EXPERIENCE

Senior Software Engineer | MNP

2024 - Current

- Architecting an enterprise-grade **Generative AI solution** on **Microsoft Foundry**, establishing design patterns and infrastructure patterns for **multi-agent workflow systems**. Leading cross-functional collaboration with Architecture and DevOps to configure secure **VNet/subnet** environments and enable **OBO (On-Behalf-Of)** actions via **MCP tools**. Currently building the foundational agent service patterns that will scale across the organization.
- Defining the technical roadmap and development patterns for **agentic systems** across the organization, including infrastructure provisioning, secure networking, and **MCP tool integration**. Partnering with stakeholders to align AI capabilities with business objectives.
- Prototyped a **Google Zanzibar-inspired authorization layer** with **OpenFGA**, establishing a **relationship-based access control (ReBAC)**. The POC is now being adopted as the foundation for a managed **Okta/Auth0** implementation, with my architectural patterns informing the production rollout.
- Designed and implemented an **event-driven notification system** using **.NET**, **RabbitMQ**, and **CosmosDB**. Processed **50,000+** daily events in staging; production rollout paused pending infrastructure cost review.

Technical Team Lead - Backend | Legible

2021 - 2024

- Led a 4-engineer team to build a **real-time reporting pipeline** using **Kafka**, **Scala**, **Go**, and **Kubernetes**, processing 10M+ publisher events daily and enabling same-day analytics for enterprise clients.
- Architected a **real-time ingestion system** that boosted data processing throughput by **500%**, reducing latency from 15 minutes to **under 90 seconds**.
- Deployed an **OpenID Connect/OAuth2** authentication solution orchestrating zero-downtime migration of 10,000+ users across 5 services, eliminating a critical security vulnerability.
- Served as technical liaison between engineering, product, and executive stakeholders, translating complex requirements into business value and influencing roadmap priorities.

Software Engineer | Bench Accounting

2020 - 2021

- Developed tools used by 200+ bookkeepers managing financial data for thousands of clients, gaining deep exposure to financial services workflows.
- Built banking integrations using **Scala**, **PostgreSQL**, **Kubernetes**, and **AWS** for seamless transaction processing.

Backend Software Engineer | Kater

2019 - 2020

- Built ride-hailing APIs optimizing driver location and reducing trip match time using **NodeJS/TypeScript**, **MongoDB**, and **CQRS/ES**.

Full Stack Software Engineer | CTO.ai

2017 - 2019

- Created GitHub-integrated APIs tracking developer performance metrics using **NodeJS**, **VueJS**, and **PostgreSQL**.
- Built automation workflows and webhooks to surface engineering insights directly within developer tooling, improving team visibility into delivery velocity.

Integration Engineer | Ericsson

2014 - 2016

- Integrated **LTE infrastructure** for ISPs across multiple regions, enabling mobile broadband services for millions of end users.
- Coordinated with cross-functional teams to validate network configurations, perform acceptance testing, and deliver handover documentation to client operations teams.

TECHNOLOGIES & LANGUAGES

Languages: NodeJS (JavaScript, TypeScript), Rust, .NET (C#), JVM (Scala, Java), SQL

Cloud & DevOps: Azure (AI Foundry, Functions, Blob Storage, Document Intelligence, AI Search), AWS, Kubernetes, Docker, CI/CD (GitHub Actions, Jenkins), IaC (Terraform, Pulumi)

Databases & Messaging: PostgreSQL, CosmosDB, MongoDB, Elasticsearch, RabbitMQ, Kafka, MQTT

Architectures: Microservices, Event-Driven Design, DDD, CQRS/ES, RESTful APIs

EDUCATION

Diploma in Web Development | Lighthouse Labs

2017

BSc in Electrical and Electronic Systems Engineering | Modern Sciences and Arts University

2008 - 2014

ADDITIONAL EXPERIENCE

Mentor & Project Evaluator | Lighthouse Labs

2018 - 2021

- Mentored 50+ junior developers through bootcamp curriculum, focusing on JavaScript, React, and NodeJS best practices.
